

Task 1

1. Name 5 IT job roles and write one line about what each role does.

1. **Software Developer** – Develops, tests, and maintains software applications.
 2. **Web Developer** – Creates and maintains websites and web applications.
 3. **Database Administrator (DBA)** – Manages and secures databases to ensure data is stored safely.
 4. **Network Administrator** – Maintains computer networks and ensures smooth connectivity.
 5. **Cybersecurity Analyst** – Protects systems and data from cyber attacks and security threats.
-

2. List 3 product companies and 3 service companies with one example of work each does.

Product Companies

1. [Microsoft](#) – Develops Windows operating system and Microsoft Office.
2. [Apple](#) – Manufactures iPhones, Macs, and other electronic devices.
3. [Google](#) – Develops Android, Google Search, and Chrome browser.

Service Companies

1. [Tata Consultancy Services \(TCS\)](#) – Provides software development and IT consulting services.
 2. [Infosys](#) – Offers cloud computing and digital transformation services.
 3. [Wipro](#) – Provides IT support, cybersecurity, and business solutions.
-

3. Write the full forms and one-line use of: GitHub, Slack, Jira, IDE, API.

Term	Full Form	One-line Use
GitHub	Git + Hub (Git-based code hosting platform)	Used to store, manage, and collaborate on source code.
Slack	<i>Not an acronym</i>	Used for team communication and collaboration.
Jira	<i>Not an acronym</i>	Used to track projects, tasks, and software bugs.

IDE	Integrated Development Environment	Used to write, edit, compile, and debug code.
API	Application Programming Interface	Allows different software applications to communicate with each other.

4. Name any 5 programming languages and mention one popular use case for each.

Programming Language	Popular Use Case
Python	Artificial Intelligence and Data Science
Java	Android application development
C	Operating system and embedded system programming
C++	Game development
JavaScript	Interactive web development

5. What is the difference between a developer and a tester? (2 lines)

- A **Developer** writes and builds software applications based on requirements.
- A **Tester** checks the software for bugs, verifies functionality, and ensures quality before release.
