

Task 2

1. What are the three main layers of software architecture? Write one line about each.

1. **Presentation Layer (UI Layer)** – Displays information to users and accepts user input.
 2. **Business Logic Layer (Application Layer)** – Processes data and implements the application's rules and logic.
 3. **Data Layer (Database Layer)** – Stores, retrieves, and manages data in the database.
-

2. Define client and server in your own words with one real-life example.

- **Client:** A client is a device or application that requests information or services from another computer.
- **Server:** A server is a computer or system that provides data or services to clients.

Real-life example:

When you open **YouTube** in your web browser, your browser is the **client**, and YouTube's computers that send videos to you are the **servers**.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

Desktop Apps	Web Apps	Mobile Apps
Installed on a computer.	Run in a web browser.	Installed on smartphones or tablets.
Can work without the internet (in many cases).	Usually require an internet connection.	Can use mobile features like GPS and camera.

4. Name any 3 databases and mention whether each is SQL or NoSQL.

Database	Type
MySQL	SQL
PostgreSQL	SQL
MongoDB	NoSQL
