

Session-1

1. What is a Program?

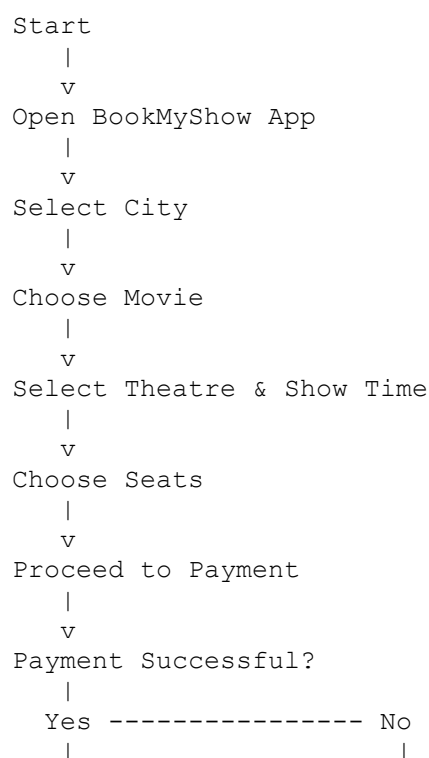

A **program** is a set of instructions written in a programming language that tells a computer or mobile device what to do. It helps perform specific tasks automatically and accurately. Programs are used in websites, mobile apps, games, banking systems, and many other applications.

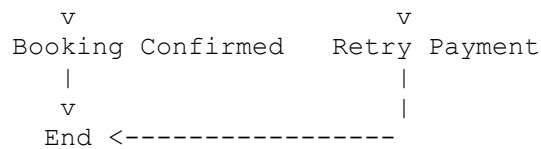

Example: When I use **Instagram**, the program displays my feed, loads photos and videos, and allows me to like, comment, and share posts.

2. Popular Programming Languages

Programming Language	Type
Java	Compiled (compiled to bytecode, then run on the JVM)
Python	Interpreted
JavaScript	Interpreted (modern engines also use Just-In-Time compilation)

3. Flowchart for Booking a Movie Ticket on BookMyShow

4. Algorithm for Ordering Food on Swiggy

1. Start.
2. Open the Swiggy app.
3. Log in to your account.
4. Enter or confirm your delivery address.
5. Search for a restaurant or food item.
6. Select the restaurant.
7. Choose the food items you want.
8. Add the items to the cart.
9. Review the cart and click **Proceed to Checkout**.
10. Select a payment method.
11. Complete the payment.
12. Receive the order confirmation.
13. Track the order until it is delivered.
14. Stop.
